Planetary Gear box Set

**Gear combinations**

- Combining the gearboxes in various ways enables 8 different gear ratios. At a gear ratio of 400:1 and voltage of 3V, the gearbox produces a torque of about 15kg.

- Long screw for 34 units.

- Short screw for 12 units.

- The gearbox can be extended with additional units for ultra slow rotation. When doing so, never hinder the rotation of the gears will be destroyed.

**Motor specifications**

- Operation voltage: 3.0V
- Stall torque: 15rpm
- Current: 1.5A
